Programmable Single Stage Heat/Cool Thermostat Model K4-W

Helpful hints

Please take the few minutes required to read the programming instructions. Experience has shown that users who do read the instructions have no difficulty in programming and using their thermostat. Then find a convenient place to hang your Instruction Manual so that you can easily refresh your memory at a later date.

Introduction

Your new thermostat contains a microcomputer that will automatically adjust the temperature of your home or office, up to four times each day, to suit your needs and at the same time save money and energy. It provides comfortable heating or cooling when you need it, and reduces energy expenditure while you are sleeping, or are out of the building, or on vacation. Your thermostat has separate weekend programming - we call it 5-1-1 so that 5 weekdays are the same, and then 2 successive days can each be different.

You can OVERRIDE or SUPERCEDE these settings whenever you wish to vary the schedule. If you have guests during the evening and you do not want the temperature to drop while they are visiting, the touch of a finger to your evening setting (for example 70° F or 21° C) will OVERRIDE your program and keep the temperature at its current setting until after your guests have gone. In addition, you can keep the temperature at a constant setting for any period from one hour up to 31 days using the TIMED OVERRIDE feature, explained on page 9.

We also recommend that everyone in the family read the instructions and, before installation, (by inserting the battery and following the steps that follow) put in a program of their choice. You will soon know how truly simple it is to know your thermostat.

The thermostat should then be installed. We recommend that a qualified technician install the thermostat because it is very important that it is properly located and all heating and cooling circuits are wired correctly. For INSTALLATION INSTRUCTIONS start on page 11.
Figure 1.

Display

(1) The time of day AM or PM and the actual room temperature are displayed alternating at 4 second intervals in normal operation, and the decimal or colon are constantly blinking when temperature and time res- pectively are shown.

(1) A set temperature and the time are displayed when programming. Nothing is blinking. The factory setting for all programs is 70°F or 20°C in heating, 74°F or 22°C in cooling and 6:00 AM.

(1) The duration of timed override is displayed. Nothing blinks. (see timed override page 9).
Note: decimal point is displayed and not a colon as in a time display.

(2) Day of week, shows the 'day indicator' at beginning of 5 day program, typically Monday of the 5 days of the week.

(3) Mode symbols, indicating system in heating (flame) heating and cooling (flame and icicle) cooling (icicle) or off mode (no symbols).

(4) Fan symbol shows when the fan is in the 'on' continuous mode.

(5) Indicators showing when heating (top bar) or cooling (bottom bar) is operating.

(6) Indicates when unit is operating on the battery (thermostat is not installed or the power is off). When battery needs to be replaced, the symbol is flashing.

(7) Indicates the program A,B,C, or D in which the thermostat is operating.

2

Slide switches

The slide switches 1 to 10 are accessed from the rear of the front unit of the thermostat. They have been preset at the factory for the most frequently used settings and

However, if you wish to review the options, see page 13, and note that, if you desire a change, most switches must be preset before the battery is installed.

Control buttons

There are Function buttons on the left and Program buttons on the right. Each button has multiple uses.

Raises temperature, adjusts hours, sets override hours

Lowers temperature, adjusts minutes

Push to advance the day indicator to the correct day of week, sets override days when override is displayed

Pressing once will resume program Pressing a second time will display timed override

The program buttons A, B, C and D

are used to gain access to programs in order to;
• enter a program
• override a program
• change or check a program

Sunday (or day preceding 5 consecutive days)	A	70	74	7.00	AM
	B	72	76	7.00	AM
	C	68	72	7.00	AM
	D	60	80	7.20	AM

NOTE:
Put different temperatures in unused programs to provide greater selection, when using timed override.

The first thing to do before programming your thermostat is to determine your own personal comfort levels for each day as to temperature and time. Figure 3 is a typical schedule.

After the temperature has been lowered all night, it would be typical to have the thermostat begin to warm the house at 6:00 AM, if you get up at 7 AM. At 8:30 AM before everyone has left for the day, the thermostat can be set to lower the temperature to save you energy during the day. Before anyone arrives home in the afternoon, the temperature may again be increased to provide comfort for you when you return. Finally, at bedtime, the thermostat again lowers the temperature to save you energy all night.

Figure 4 is a blank form for you. Start with weekdays, and write in your personal comfort level, and the time you want the furnace (or air conditioner) to come on in the morning to bring your home to that temperature. It is suggested that you set your desired program times about 1 hour before the time you actually require your home to reach the set temperature. So if you get up at 7 AM, set the furnace to come on at 6 AM.

Then write in the Saturday and Sunday settings.

Fill in this chart to help program your schedule

DAYS	PROGR.	HEAT°	COOL°	START TIME	AM/PM
Weekdays (or any 5 consecutive days)	A				
	B				
	C				
	D				
Saturday (or day following 5 consecutive days)	A

	D				

Figure 4.

Battery installation and startup

Figure 5. Display on start-up

1. Separate the thermostat front unit from the mounting plate (page 12 figure 13).

2. Install the battery.

3. Operate the START-RUN switch back and forth and leave in RUN position.

4. Ensure that the display is flashing once per second as in figure 5. (If it is not, repeat step 3).

Press the ▪ button and observe the time and temperature alternating every 4 seconds.

Actual temperature

Time

Set correct time of day

When the display is showing time, press and hold the ☐ button, until the hour digits advance to the correct hour, ensuring that AM/PM indicator is correct. (This button will not affect minutes).

Again when the time is displayed, press and hold ▼ button until the minute digits advance to the correct minute. (This button will not affect the hours).

Select /	
Select heat/ cool system

By consecutively pressing and releasing the ▣ button the following symbols will appear in this order on your display.

COOL	AUTO	HEAT
▮	🝊	🝊
	▮	

Select and display your system requirements ie, heat only, cool only, or heating and cooling (auto change over).

NOTE
• The battery symbol will show when power is off.

• Battery symbol will flash to indicate weak battery.

•When no heat or cool symbol is displayed, the system is off.

•If you have 🝊 only or ▮ only displayed, you will program one temperature and the time. If you have both 🝊 and ▮ (auto change over) you will program first heat, then cool, and then time.

6

Enter your program for 5 weekdays

(1) Press and release [A].

If your system selection includes heat you will observe the display as in (Figure 7).

(2) Press [ ] to raise or [▼] to lower, to your desired temperature

- Setting below 51°F or 10.5°C shuts system off.
- Setting below 55°F or 12°C may freeze pipes.

(3) Press and release [A] again. If your system selection includes cool only you'll observe the display as in figure 8. If system selection is heat or cool only you'll observe the display as in figure 9.

If display now shows time, press [A] again to display temperature set point before continuing.

Press [ ] to raise or [▼] to lower, to your desired temperature.

NOTE: The thermostat's design will not allow the heat and cool setpoints to be set closer than 4°F or 2°C.

(4) Press and release [A] again,and you will observe the display as Figure 9. Press

[ ] to advance the hours, and [▼] to advance the minutes (10 minute increments) to the desired start time.

You have now entered the "A" program for 5 days into the computer memory. Repeat above steps substituting [B] [C] **or** [D] **for** [A] .
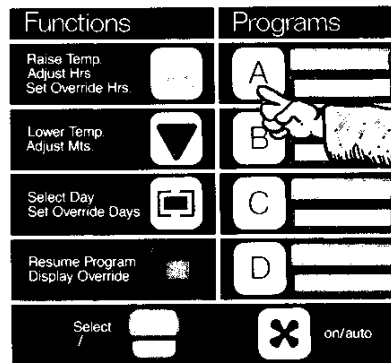

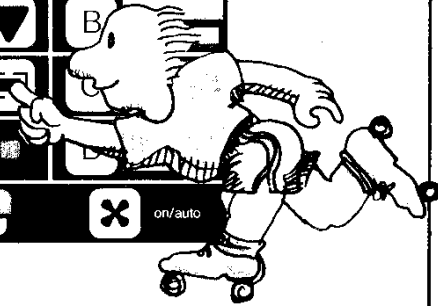

Figure 7. Heat set point

Figure 8. Cool set point

Figure 9. Time
Enter program for Saturday

Press [■] and advance the day indicator to the right hand position. Now follow step 5 for programs A,B,C and D for Saturday.

[I I I I I I■]

Enter program for Sunday

Press [■] again and advance the day indicator to the left hand position. Now follow step 5, for programs A,B,C, and D for Sunday.

[■I I I I I I]

Return to normal operations

Press [□] and the display will alternate between temperature and time and control of your environment will now be automatic as programmed.

Continuous override

At any time you may override the scheduled program by merely pressing the program button [A] [B] [C] or [D] with the temperature you wish to hold. The display will then only show that temperature. The temperature will now control continuously at the selected program temperature until you press ▣ (unless you have used the timed override feature, in which case the normal program will resume after the override time has elapsed).

Enter timed override

While it is not necessary for normal operations, timed override is a very convenient feature and its use is strongly recommended.   a minimum of 1 hour is mandatory if keyboard is to be disabled: see page 10.

(1) Press ▣ until you observe your display as in figure 10.

(2) Press and hold ☐ until the desired hours of override are shown in the two right digits as in figure 11.

(3) Press [■] until the desired days are shown.

Figure 11 shows a recommended typical setting of 3 hours of timed override and no days.
Any time the override is used, (by simply pressing button [A] [B] [C] or [D] which has the desired temperature) the temperature called for will control for 3 hours and then the normal program will resume again.
Figure 10.
Display of timed override
Figure 11.
Verify your programs

1. Press [A] and check that it now shows your desired heat set point, for your 5 day program.

Press [A] again and check your cool set point.

Press [A] again and check your time.

(2) Repeat for programs B, C, and D.
(3) Repeat for Saturday and Sunday programs, after pressing [■] to advance to the desired day.

(4) Record your program in pencil on the thermostat (figure 12).

Simply pressing ▣ returns to programmed operation.

Select ... /	on/auto

# Fan operation

To select FAN ON press [X] . The fan will operate continuously and the fan symbol will be displayed. To select FAN AUTO, which operates the fan only when the system is running, press [X] a second time and the fan symbol will disappear.

Battery symbol

The battery symbol indicates two conditions. If it is flashing, it indicates a missing or low battery condition. When this condition occurs, go to BATTERY INSTALLATION AND START-UP for instructions on how to replace the battery. If the battery symbol is displayed continuously, it indicates that the power is off and that the thermostat is maintaining its memory using the battery. A fresh battery will last 5 to 10 days without power to the thermostat. With continuous power the battery should last two to three years.
Caution: use alkaline battery only.

Keyboard disable

All keyboard buttons (except [A] [B] [C] and [D]) can be disabled by setting slide switch # 7 ON. This prevents the program from being altered by unauthorized people. **TIMED OVERRIDE MUST be used in conjunction with KEYBOARD DISABLE because RESUME is disabled.** We suggest a TIMED OVERRIDE interval of at least one hour.
Remote sensor Model RSK4

If you are planning on installing a remote sensor you must use a shielded cable with a ground wire or coaxial cable.Thermostat wire is not suitable for the remote sensor. Follow instructions that come with sensor.

ACTUAL SIZE SHOWN

• Disconnect power supply to systems before *beginning installation to prevent personal injury or* death from electrical shock or entanglement in moving parts and to prevent equipment damage.
• Ensure control voltage is 20-30 Vac.
• We recommend installer be a trained, experienced service technician.

Thermostat location

To ensure proper operation, the thermostat should be mounted on an inside wall in a frequently occupied area of the building. In addition, its position must be at least 18 inches from any outside wall, and approximately five feet above the floor in a location with freely circulating air of an average temperature. Be sure to avoid the locations described below when determining a site for the thermostat.

ZONE INTEGRITY MUST BE MAINTAINED TO EFFICIENTLY CONTROL UNITS OR GROUPS OF UNITS. UNLESS ZONES OF CONTROL ARE CONSIDERED AND ACCOUNTED FOR, ADJACENT UNITS MAY OPERATE IN HEATING AND COOLING MODES SIMULTANEOUSLY.

Note: When optional remote sensor is used, these restrictions apply to the sensor location. The thermostat may then be located anywhere except in direct sunlight, harsh atmospheres or near sources of electrical interference.

Do not locate the thermostat

• behind doors or in corners where freely circulating air is unavailable.
• where direct sunlight or radiant heat from appliances might affect control operation.
• on an outside wall.
• adjacent to, or in line with, conditioned air discharge grilles, stairwells, or outside doors.
• where its operation may be affected by steam or water pipes or warm air stacks in an adjacent partition space, or by an unheated/ uncooled area behind the thermostat.
• where its operation will be affected by the supply air of an adjacent unit.
• near sources of electrical interference such as arcing relay contacts.

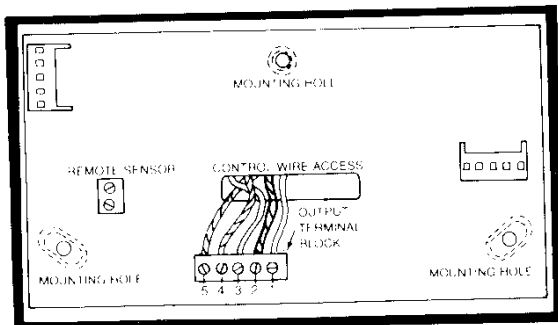

Figure 15. Mounting plate

1. Make sure the power to the systems is off.
Figure 13.

Mounting plate

2. Pull front unit off of mounting plate.
3. For new installation, indentify wires as per table 1. For replacement, identify wires before removing old thermostat.
4. Position the mounting plate so that all the control wires protrude through the centrally located slot (figure 15) Level for appearance and mark the three mounting holes. Drill holes using a 3/16" (5mm) drill bit. Install supplied anchors, reposition the mounting plate and secure it to the wall. Do not overtighten screws.
5. Connect the control wires to the proper output terminals (figure 14).

Table 1

TERMINAL	SYMBOL	OUTPUT TERMINAL DESCRIPTION
1	G	Energized when fan switch is on or when Y or W is energized.
2	Y	Energized when cooling is required.
3	RC	24 Vac connection for cooling and fan transformer (Jumpered to RH for single transformer systems).
4	RH	24 Vac connection from equipment transformer.
5	W	Energized when heating is required.

DO NOT INSTALL BATTERY UNTIL SLIDE SWITCHES INDICATED ARE SET!

6. There are a number of options that you can select with the slide switches. They slide up and down very easily using a pen. The ON position is marked on the block that encloses the switches (figure 16). Set the slide switches using the information below as your guide.
Figure 16. Slide switches

| Fan is forced into AUTO during setback. | 24 hour clock format. | All buttons disabled except for A,B,C, & D. | Temperature display in °F. | Normal operation with internal sensor. |

ON ↑

INACTIVE SWITCHES

1 2 3 4 5 6 7 8 9 10

| Fan button operates normally. | 12 hour clock format. | Keyboard functions normally. | Temperature display in °C. | Remote sensor operation. |
SWITCHES 1,2,3 and 4 are inactive

SWITCH 5.
OFF - Fan comes on only when heating or cooling equipment comes on (ON/AUTO). ON - In the FAN ON mode the fan runs continuously when the building is occupied but goes to FAN AUTO during setback or setup periods when the building is unoccupied. The setback temperature must be below 66°F or 18°C and the setup must be above 82°F or 26°C to use this feature.

SWITCH 6.
OFF - Time is displayed in 12 hour format.
ON - Time is displayed in 24 hour (military or European) format.

SWITCH 7.
OFF - Keyboard operates normally.
ON - All buttons are disabled except A, B, C, and D. This feature prevents a program from being accidentally (or deliberately!) altered. Ensure that you set a minimum of 1 hour (00.01)in timed override.

SWITCHES 8 AND 9.
OFF - Temperature displayed in Celsius.
ON - Temperature displayed in Fahrenheit.

SWITCH 10.
ON - Normal operation with internal temperature sensor.
OFF - For use with remote sensor. Do not place off until just before placing the front unit onto the mounting plate.

TEMP CALIBRATE

Checking installation

UNIT HAS BUILT-IN TIME DELAYS FOR HEAT AND COOL. THEY MAY VARY DEPENDING ON ROOMTEMP RISE OR FALL. DELAYS CAN BE FROM 3 TO 15 MIN. PER STAGE.
Follow the checkout procedure outlined in Table 2. The thermostat should be in the OFF mode. When the system power is turned on the battery symbol should disappear or flash if the battery is weak or missing. Minimum on and off times have been built into the thermostat to prevent HVAC equipment damage due to short cycling. These delays may be longer than specified if the HVAC equipment has built in delays.

7. Install the battery.
8. Operate the START-RUN switch. Move to the START position. Wait, then move it to the RUN position and leave it there.
9. Ensure the display is flashing once per second (figure 17). If it is not, repeat step 8.
10. Push the RESUME button and the display will alternate every 4 seconds between room temperature and time.
11. Replace the thermostat front unit on mounting plate.

Table 2

STEP	PUSH BUTTON	DISPLAY SHOWS	RESPONSE
1	⊟	▼	Cool mode
2	⊟	◊ ▼	Auto heat/cool mode
3	⊟	◊	Heat mode
4	⊟	(no symbol)	All sytems go off after 7 seconds.
5	⊟	select required mode (step 1, 2, or 3) for further testing	
6	A	Stationary 70 or 74 (20.0 or 22.0)	Heating and cooling set-points. Room temperature will be maintained at these set-points
7	▲ ▼	Increase or decrease of set point temperature	Equipment will respond subject to time delays
8	A hold		**REDUCING BUILT-IN TIME DELAY:** 1. The unit must be in °F (Slide switches 8 and 9 on). 2. Select either heat or cool to be tested. 3. Raise or lower heat or cool setpoint 10° in [A] 4. Press and hold the [A] until system energises. (Page 2 no. 5) 5. Equipment will now operate subject to its own delays
9	[✕]	✕	Fan runs continuously subject to Figure 16, Page 13, switch # 5
10	[✕]	(no FAN symbol)	Fan operates automatically

SYMPTOM	CAUSE	ACTION
